Profile ::

Full Stack Software Developer who made a recent pivot from a career in institutional investment consulting and asset management. Organized, detail-oriented, and passionate about technology, with strong interpersonal and crossfunctional communication skills. I love challenging myself to learn new things, problem solve, and innovate.

Tech Stack ::

Languages:

JavaScript HTML/CSS

Back End:

Node.js Express CLI

Databases:

PostgreSQL MongoDB mongoose

Practices:

TDD DDD Pair/Mob Programming Front End:

React Redux

Testing Suites:

OUnit Jest

Tools:

GitHub Git **VSCode** Heroku Slack Compass Postman

Others:

REST APIS Responsive Web Design

Projects::

@heartbotbb | Back-End Development Deployed Site // Github

Tech Stack // Node.js, Express, MongoDB, mongoose

HeartbotBB is a Twitter bot created with a predominantly back-end tech stack that leverages the Twit npm package. The bot was built over five days, alongside four Alchemy contributors. The team also developed a front end for interaction with users who do not have Twitter. Data aggregations were applied to the tweets themselves, allowing the team to track tweet trends.

Tone Check | Full Stack Development Deployed Site // Github Tech Stack // Node.js, Express, PostgreSQL

The Tone Check application takes in a body of text, and subsequently analyzes the input at both the document and sentence level, leveraging the IBM Watson Tone Analyzer API. The application also features user authorization and displays historical user-specific submissions, as well as all-time user submissions. This application was built alongside three Alchemy contributors over the course of five days.

Deja Brew | Vanilla JavaScript Development Deployed Site // Github Tech Stack // JavaScript, HTML, CSS

A vanilla JavaScript application that aims to help users memorize popular coffee drinks and teach them how to make them (i.e., which ingredients in which order). Beyond study and practice modes, users can also play a game mode that tests their knowledge in a race against the clock. User data is stored via session and local storage to show successfully created drinks for the session, as well as over time.

Work Experience ::

RVK, Inc | Portland, Oregon | 2013 - 2019

Senior Investment Research Analyst, Global Equities | Feb 2017 - May 2019 Investment Research Analyst, Global Equities | Oct 2014 - Feb 2017 Investment Analyst, Performance Analytics | June 2013 - Oct 2014

Palouse Capital Management | Spokane, Washington | 2012 - 2013 Equity Analyst Intern, Asset Management | Nov 2012 - May 2013

Education ::

Alchemy Code Lab | Portland, Oregon | 2019

Enrolled in program with rigorous MERN stack curriculum that accumulates to ~1,300 hours of classwork and study. Focus on learning key programming skills, but more importantly, developing tools and methods to learn any coding language.

Whitworth University | Spokane, Washington | 2009 - 2013

B.A. Economics, B.A. International Business, B.A. Spanish Language & Literature Summa Cum Laude
